List of Contributors	xiii
Preface	xv
Hans Gaffron (1902–1979): A Tribute, by Martin Kamen	xix
Hans Gaffron, 1902–1979, by Norman I. Bishop	xxi

1

Introduction to Photosynthesis: Carbon Assimilation and Plant Productivity 1

ARCHIE R. PORTIS, JR.

I. Introduction	1
II. General Discussion	1
III. Conclusions	11
References	11

2

Introduction to Genetics and Molecular Biology of Photosynthetic Bacteria, Cyanobacteria, and Chloroplasts 13

VENETIA A. SAUNDERS and DENNIS E. BUETOW

3

Genetics and Molecular Biology of Photosynthetic Bacteria and Cyanobacteria 17

VENETIA A. SAUNDERS

I. Introduction	18
II. Genetic Organization of Photosynthetic Prokaryotes	18
III. Mutations Affecting Photosynthesis in the Rhodospirillaceae	25

IV. Genetic Exchange Systems and Genetic Mapping	28
V. Prospects for Applied Research	35
VI. Concluding Remarks	36
References	37

4

Molecular Biology of Chloroplasts

43

DENNIS E. BUETOW

I. Introduction	45
II. The Chloroplast Genome	46
III. Chloroplast Ribonucleic Acid	64
IV. Evolution of the Chloroplast Genome	72
V. Conclusions	76
References	78

5

Biogenesis of the Photosynthetic Apparatus in Prokaryotes and Eukaryotes

89

ITZHAK OHAD and GERHART DREWS

I. Introduction	90
II. Formation of the Photosynthetic Apparatus in Facultative Phototrophic Bacteria	93
III. Formation of the Eukaryotic Photosynthetic Membranes	107
References	133

6

Carbon Dioxide Fixation Pathways in Plants and Bacteria

141

JAMES A. BASSHAM and BOB B. BUCHANAN

I. Introduction	143
II. The Reductive Pentose Phosphate Cycle	145
III. The Four-Carbon (C ₄) Intermediate Pathways	166
IV. Crassulacean Acid Metabolism	175
V. Possibilities for Plant Yield Improvement	176
VI. Carbon Dioxide Fixation in Photosynthetic Bacteria: Reductive Pentose Phosphate Cycle and Associated Reactions	177
VII. Ferredoxin-Linked Carbon Dioxide Assimilation in Photosynthetic Bacteria	178

VIII. Path of Carbon Dioxide Assimilation in Photosynthetic Green Bacteria	182
IX. Concluding Remarks	183
References	183

7

Photorespiration

191

WILLIAM L. OGREN and RAYMOND CHOLLET

I. Introduction	192
II. Photorespiration in C ₃ Plants	192
III. Photorespiration in C ₄ Plants	204
IV. Photorespiration in C ₃ -C ₄ Intermediate Plants	214
V. Photorespiration in Other Plants and Bacteria	219
References	224

8

Crassulacean Acid Metabolism (CAM)

231

MANFRED KLUGE

I. Introduction	232
II. Basic Phenomena of CAM	232
III. The Metabolic Sequence of CAM	234
IV. Gas Exchange Linked with CAM	247
V. Ecology of CAM	254
VI. Productivity of CAM Plants	257
References	258

9

Environmental Regulation of Photosynthesis

263

JOSEPH A. BERRY and W. JOHN S. DOWNTON

I. Introduction	265
II. Analysis of Environmental Responses	265
III. Control of Photosynthesis by Light Intensity	288
VI. Control of Photosynthesis by Temperature	294
V. Water Stress and Photosynthesis	306
VI. Drought Resistance	311
VII. Responses to Limiting Nutrients and Salinity	319
VIII. Responses to Environmental Pollutants	326
IX. Conclusions	334
References	335

10**Translocation of Photosynthate**

345

DONALD R. GEIGER and ROBERT T. GIAQUINTA

- | | |
|--|-----|
| I. Photosynthesis, Translocation, and Crop Yield: | |
| Introductory Considerations | 346 |
| II. Relation between Translocation and Photosynthesis | 349 |
| III. Potential Means of Controlling Export | 356 |
| IV. Processes Affecting Export of Products of Photosynthesis | 370 |
| V. Conclusions | 383 |
| References | 383 |

11**Predicting Photosynthesis**

387

JOHN D. HESKETH, JOSEPH T. WOOLLEY, and DOYLE B. PETERS

- | | |
|---|-----|
| I. Introduction | 388 |
| II. Predicting Leaf Behavior | 390 |
| III. Predicting Canopy Behavior | 401 |
| IV. Biophysical Principles and General Philosophy | 412 |
| V. Conclusions | 413 |
| References | 414 |

12**Prospects of Applying Knowledge of Photosynthesis toward Improving Crop Production**

419

ROGER M. GIFFORD and COLIN L. D. JENKINS

- | | |
|--|-----|
| I. Introduction | 420 |
| II. Crop Capacity to Intercept Light | 422 |
| III. Breeding for Photosynthesis Rate | 431 |
| IV. Chemical Manipulation of Photosynthesis and Photorespiration | 443 |
| V. Conclusions | 449 |
| References | 450 |

13**Global Photosynthesis in Relation to Our Food and Energy Needs**

459

ROGER M. GIFFORD

- | | |
|--|-----|
| I. The Argument | 460 |
| II. Photosynthetic Productivity of the Biosphere | 461 |

III. Fossilized Photosynthesis for Fuel	465
IV. The Global Carbon Cycle	471
V. Interactions between Photosynthesis, Food, and Fuels	479
VI. Conclusions: Photosynthetic Resources and Man's Future	488
References	490

Special Topics

14

Canopy Photosynthesis and Yield in Soybean

499

A. LAWRENCE CHRISTY and CLARK A. PORTER

I. Introduction	499
II. Changes in Photosynthesis during the Day	500
III. Effect of Plant Population	502
IV. Effect of Shading	504
V. Photosynthetic Conversion Efficiency	507
VI. Discussion	509
References	510

15

The Functional Role of Biocarbonate in Photosynthetic Light Reaction II

513

ALAN STEMLER

I. Introduction	514
II. Binding of CO_2^* to the Photosystem II Complex	516
III. Dynamic Aspects of CO_2^* Binding	516
IV. The Active Forms of CO_2^*	519
V. Location of the CO_2^* Binding Site	521
VI. Dual Effects of CO_2^* Depletion	522
VII. Possible Roles for CO_2^* in Photosystem II Chemistry	525
VIII. Sites of Action of CO_2^*	526
IX. A Working Hypothesis: Hydrated CO_2 as the Immediate Source of Photosynthetic O_2	532

X. Labeling the O ₂ -Evolving Precursor	536
XI. Conclusions	538
References	538

16

Bicarbonate or Carbon Dioxide as a Requirement for Efficient Electron Transport on the Acceptor Side of Photosystem II

541

WIM F. J. VERMAAS and GOVINDJEE

I. Introduction	543
II. A Site of HCO ₃ ⁻ * Action on the Acceptor Side but Not on the Donor Side of Photosystem II	544
III. Postulated Effects of HCO ₃ ⁻ * on the Donor Side of Photosystem II	552
IV. Conclusions	555
References	556
 Index	 559
