**Abstract** As an outgoing Editor of the Historical Corner of *Photosynthesis Research*, I present here the following list of papers of historical interest for the benefit of all. The first paper I published was: Govindjee (1988) The Discovery of Chlorophyll–protein Complex by Emil L. Smith during 1937–1941. Photosynth Res 16:285–289. In order to bring to the readers this *List* of references on the historical papers published in this journal (and some even elsewhere), I have organized these papers under the following headings (some are arbitrarily assigned to a particular section since they may fit in more than one section): (I) biographies (that include obituaries and tributes, arranged alphabetically, with dates of birth and death); (II) recognitions of scientists (arranged alphabetically) by others; (III) personal perspectives (arranged alphabetically); (IV) historical papers (first chronologically, by the year of publication, and then alphabetically by the names of the editors); (V) special issues of *Photosynthesis Research* (chronologically by the year of publication and then alphabetically by the names of editors); and lastly (VI) Conferences (available reports in *Photosynthesis Research*).

*“The firefly seems afire, the sky looks flat;  
Yet sky and fly are neither this nor that”*

I will appreciate readers to send me (by e-mail: gov@illinois.edu) corrections, if any, and additional references from other journals.
