

*General, Non-Lecture-Specific Questions: Are we required to memorize the the structures of all 20 amino acids? Or is there an easier way?*

No, please don't spend your time memorizing amino acid side chains. You will be given a table of amino acid structures as part of your exam, and they will even be categorized the same way we talked about them in class. You should, however, understand the *consequences* of being in one group versus another. What does it mean to be polar? What is the significance of being hydrophobic? And so on...
