Undergraduate Summer Internship Opportunity

At Argonne National Laboratory

Argonne’s Educational Program has an opening for a summer internship to develop an education professional development workshop in environmental metagenomics. Student will have the opportunity to work in a state of the art microbiology lab and expand their bioinformatics skills in the process of developing the workshop.

Student Requirements:

Sophomore or Junior. Senior will be considered if going on to an MS program in similar field.

Citizenship: US or Legal Permanent Resident.

Majors: Microbiology or closely related

- Experience in PCR, general electrophoresis, DNA handling is required
- Must be interested in microbial ecology and the application of bioinformatics
- Must be self-motivated, proactive, and a good communicator
- A rudimentary understanding/experience with bioinformatics tools is desirable. We will be using QIIME for analysis, which uses command lines.
